Summary

Computer Systems Engineering student at ISITCOM with a strong interest in IoT and embedded systems. I have completed end-to-end projects combining hardware and software, including RFID access control and soil moisture monitoring on Arduino, as well as web applications. Comfortable with C/C++, Python, Java and SQL, with a strong taste for solving concrete problems.

Education

Bachelor's Degree in Computer Systems Engineering

- Institut Supérieur d'Informatique et des Technologies de Communication (ISITCOM), Hammam Sousse, Tunisia — **September 2024 – Present**
- Focus: Embedded Systems & IoT,

Experience

Engineering / IT Intern, LEONI (Sousse) **— June – August 2026**

- Two-month internship in an automotive industrial environment, focused on IoT solutions and web management applications.
- Built an end-to-end RFID access control system (details in the Projects section).
- Developed a Laravel stock management application with a web dashboard: management of users, sites, products, and more.

Projects

Smart RFID Lock System, Arduino, C++, Python, Laravel, MySQL **— August 2026**

- Designed an end-to-end IoT access control platform: embedded hardware, a Python serial communication gateway, and a Laravel web dashboard.
- Programmed an Arduino microcontroller in C++ with an RC522 RFID reader, a servo-driven lock, and an LCD displaying the status in real time.
- Developed a Laravel back-office for card registration, role and access management, real-time analytics charts, and automated activity logs.

Soil Moisture Monitoring System, Arduino, sensors **— April 2026**

- Designed and built a soil moisture measurement system with real-time data display.
- Programmed the microcontroller in C++ and integrated sensors, building solid hands-on experience in IoT and embedded programming.

Animal Adoption Website, HTML, CSS, JavaScript, PHP **— March 2026**

- Web platform connecting animals with adopters, with an ergonomic interface (Figma mockups) and a database.

Hackathons

AKT26 Hackathon – Al-Khawarizmi Tour 2026, AI Track — November 2026

- Took part in the AI track of the Al-Khawarizmi Tour 2026 hackathon as part of a team.

CYBERBENDERS AI Challenge – Cybersecurity Hackathon — November 2024

- Took part in a 16-hour hackathon: solved CTF-style challenges under time pressure.

- Penetration testing, network analysis, and team problem-solving.

Technologies

- **Embedded & IoT:** C/C++ (Arduino), sensors and actuators (RFID RC522, servo motor, LCD screen, etc.), serial communication
- **Programming:** Python, Java, JavaScript
- **Web & Data:** Laravel, PHP, HTML/CSS, SQL/MySQL, MongoDB, data analysis and AI
- **Tools:** VS Code, Figma

Certifications and Courses

- NVIDIA Deep Learning Certification, NVIDIA **— November 2026**
- Networking Academy Learn-A-Thon 2025, Cisco **— January 2026**
- Introduction to AI and Generative AI, Nomu Al Ghurair TechUp Explorer (Udacity) **— March 2026**
- Image Processing with Python, DataCamp **— December 2025**

Languages

- Arabic (Native)
- French (Fluent)
- English (Fluent)
